Milo Glass Pendant

Installation & Care Guide — AIR HAVEN

SAFETY NOTICE: This is a hardwired lighting fixture. Installation should be performed by a qualified, licensed electrician in accordance with local electrical codes. Disconnect power at the circuit breaker and verify with a voltage tester before beginning any work.

Installation Steps

This is a hardwired fixture and should be installed by a qualified, licensed electrician in accordance with local electrical codes, with power disconnected at the breaker before work begins.

1. Turn off power to the circuit at the breaker box and confirm with a voltage tester.
2. Mount the ceiling bracket to the electrical junction box (the 5" diameter, 0.5" tall canopy should fully cover the junction box).
3. Connect the fixture's wiring to the household wiring (ground, neutral, and live) inside the junction box.
4. Adjust the suspension rod or cord to your desired hanging height before final tightening, using the adjustable range for your chosen size (13.25"-51.25" for the 7.5" size, 15"-53" for the 10.75" size, or 12.2"-50.2" for the 16" size).
5. Install the bulb(s) into the socket(s) before attaching the shade, if the shade's design makes the bulb hard to reach once assembled.
6. Secure the fixture flush to the ceiling and restore power at the breaker, then test.

Care & Maintenance

The fixture's glass shade and metal frame should be cleaned gently to keep its finish and appearance looking new.

- Turn off power and let any bulb cool before cleaning.
- Dust the glass shade and metal frame with a soft, dry cloth on a regular basis.
- Avoid household glass/metal cleaners and abrasive pads, which can dull or scratch the finish.
- Wipe the milk glass or clear glass shade gently with a soft, lint-free cloth to avoid scratching the surface.
