Vanna Linen Flushmount

Installation & Care Guide — AIR HAVEN

SAFETY NOTICE: This is a hardwired lighting fixture. Installation should be performed by a qualified, licensed electrician in accordance with local electrical codes. Disconnect power at the circuit breaker and verify with a voltage tester before beginning any work.

Installation Steps

This is a hardwired fixture and should be installed by a qualified, licensed electrician in accordance with local electrical codes, with power disconnected at the breaker before work begins.

1. Turn off power to the circuit at the breaker box and confirm with a voltage tester.
2. Mount the ceiling bracket to the electrical junction box.
3. Connect the fixture's wiring to the household wiring (ground, neutral, and live) inside the junction box.
4. Ensure the flared dome frame sits flush and centered against the ceiling before final tightening.
5. Install the bulb(s) into the socket(s) before attaching the shade, if the shade's design makes the bulb hard to reach once assembled.
6. Secure the fixture flush to the ceiling and restore power at the breaker, then test.

Care & Maintenance

The fixture's linen-blend fabric and metal frame should be cleaned gently to keep its finish and appearance looking new.

- Turn off power and let any bulb cool before cleaning.
- Dust the linen-blend fabric and metal frame with a soft, dry cloth on a regular basis.
- Avoid household glass/metal cleaners and abrasive pads, which can dull or scratch the finish.
- Spot clean the fabric diffuser gently with a dry or barely damp cloth and avoid soaking it in water.
