

Installation Guide

Alfi Wall Sconce

BEFORE YOU BEGIN

The Alfi Wall Sconce is a wall-mounted fixture. Confirm whether your unit is hardwired or plug-in before starting, and always work with the power off.

SAFETY FIRST

- Read all instructions fully before beginning installation.
- Always disconnect power at the breaker before working with any electrical connections, and verify power is off with a non-contact voltage tester.
- Confirm your mounting surface, electrical box, or junction box is rated to support the fixture's weight.
- If you are not comfortable performing electrical work, hire a licensed electrician. Installation should comply with local electrical codes.
- Allow any recently used bulbs to cool before handling, and handle glass, stone, and other natural-material components with care.

INSTALLATION STEPS

1. If hardwired, switch off power to the circuit at the breaker; if plug-in, unplug before installing.
2. Choose a mounting location and mark the position of the mounting holes.
3. Install wall anchors as needed and secure the mounting bracket.
4. Attach the sconce body to the bracket and secure it in place.
5. If hardwired, connect the wiring per local electrical code; if plug-in, route the cord to a nearby outlet.
6. Insert a compatible G4 bi-pin bulb rated for AC 110V (bulb not included; do not use with a low-voltage 12V transformer).
7. Restore power and test the fixture.
