

Installation Guide

Alton Wall Sconce

BEFORE YOU BEGIN

This sconce is fully cordless and rechargeable, so it mounts anywhere without wiring to a switch or junction box.

SAFETY FIRST

- Read all instructions fully before beginning installation.
- Always disconnect power at the breaker before working with any electrical connections, and verify power is off with a non-contact voltage tester.
- Confirm your mounting surface, electrical box, or junction box is rated to support the fixture's weight.
- If you are not comfortable performing electrical work, hire a licensed electrician. Installation should comply with local electrical codes.
- Allow any recently used bulbs to cool before handling, and handle glass, stone, and other natural-material components with care.

INSTALLATION STEPS

1. Fully charge the fixture before first use (approximately 6 hours).
2. Mark the desired wall location — typically 65–72" from the floor above a vanity, or 6–8" above a piece of artwork for picture lighting.
3. Attach the back panel to the wall with the mounting hardware, checking level before fully tightening.
4. Attach the sconce body to the mounted back panel.
5. Use the built-in touch switch or the included remote to power on and select brightness and color temperature.

NEED HELP?

Contact AIR HAVEN customer support through your order confirmation email or our website if you have any questions during installation.
